

Bugcrowd, Inc. Statement of Attestation

AgileBits engaged Bugcrowd Inc. to perform a public, ongoing bug bounty program on AgileBits's 1Password for Teams/Families web and native applications. Testing is ongoing, and as such, this document covers the period of 2/18/2016– 1/1/2020.

A private bug bounty program is a novel approach to securing web applications. Traditional penetration tests use only one or two researchers to test an entire application, while a private bounty program leverages a crowd of security researchers. This increases the probability of discovering esoteric issues that automated testing cannot find and that traditional vulnerability assessments may miss in the same testing period.

This program is currently open to the public and has received submissions from 387 unique researchers - these issues ranged in scope and severity, with nine high priority issues being discovered during this timeframe. Despite the presence of these high priority findings no user secrets were at risk. Additionally, please note that as of 1/1/2020, all the high priority submissions from this program were confirmed to be resolved. The above information represents a point-in-time snapshot of AgileBits's overall security posture.

About Bugcrowd

The innovator in crowdsourced security testing for the enterprise, Bugcrowd harnesses the power of more than 60,000 security researchers to surface critical software vulnerabilities and level the playing field in cybersecurity. Bugcrowd also provides a range of responsible disclosure and managed service options that allow companies to commission a customized security testing program that fits their specific requirements. Bugcrowd's proprietary vulnerability disclosure platform is deployed by Spotify, Mastercard, Fiat-Chrysler, and many others. For more information visit www.bugcrowd.com.
